Through years growth has been increasing and as a result more space for production and storage was getting more and more urgent.

When new facilities for production were taken into use Constructor was used as a sparring partner already during design of the room

Solution:

With the partitioning system Cassette900 14 welding cabins were established. Furthermore, a closed and dustfree welding room was built for welding of stainless steel. Cassette900 has several advantages; being a modular system it is easy to disassemble and reassemble on a new location. It is easy to extend and it provides a strong and stable solution, when used to carry equipment, tools, shelves etc. As Cassette900 is built of nonflammable material – steel, plaster and mineral cotton – the fire protection is excellent.

Capacities:

Number of welding cabins: 14

Number of closed welding room: 1
